

2. Solution

Symmetry property

$$\left. \begin{aligned} a(u, v) &= \int_0^1 u, x \cdot v, x \, dx = \int_0^1 \frac{\partial u}{\partial x} \cdot \frac{\partial v}{\partial x} \, dx \\ a(v, u) &= \int_0^1 v, x \cdot u, x \, dx = \int_0^1 \frac{\partial v}{\partial x} \cdot \frac{\partial u}{\partial x} \, dx \end{aligned} \right\} \Rightarrow a(u, v) = a(v, u)$$

Homework 1

$$(u, v) = \int_0^1 uv \, dx \Rightarrow (u, v) = (v, u)$$

$$(v, u) = \int_0^1 vu \, dx$$

Due: 2023 Sep. 25

1. Go over Sec. 1.1 to 1.4 of the textbook.

✓ 2. Do Exercise 1 on page 7.

3. Consider the function $h(x)$ given by

$$h(x) = \begin{cases} \frac{1}{2}x^2 & 0 \leq x < 0.5 \\ \frac{1}{4} - \frac{1}{2}(x-1)^2 & 0.5 \leq x \leq 1 \end{cases}$$

(a) Is $h(x)$ in the space \underline{C}^1 ?(b) Is $h(x)$ in the space \underline{C}^2 ?(c) Is $h(x)$ in the space \underline{H}^2 ?4. Consider a boundary-value problem (i.e. strong-form problem) with the Dirichlet boundary conditions imposed on both ends, that is,

$$(s) \begin{cases} u_{,xx} + f = 0, \\ u(0) = g_0, \\ u(1) = g_1. \end{cases}$$

$$\mathcal{S} = \{u : u \in H^1, u(0) = g_0, u(1) = g_1\}$$

$$\mathcal{V} = \{w : w \in H^1, w(0) = 0, w(1) = 0\}$$

(a) State its corresponding weak-form problem.

(b) Prove the equivalence between the strong- and weak-form problems.

3. Solution

a) $C^k(\Omega)$: the class of continuous functions possessing k continuous derivative

$$\left. \begin{aligned} \lim_{x \rightarrow 0.5^-} h(x) &= \lim_{x \rightarrow 0.5^-} \frac{1}{2}x^2 = \frac{1}{8} \\ \lim_{x \rightarrow 0.5^+} h(x) &= \lim_{x \rightarrow 0.5^+} \left[\frac{1}{4} - \frac{1}{2}(x-1)^2 \right] = \frac{1}{8} \end{aligned} \right\} \Rightarrow \lim_{x \rightarrow 0.5} h(x) = \frac{1}{8}$$

$$\lim_{x \rightarrow 0.5^+} h(x) = \lim_{x \rightarrow 0.5^+} \left[\frac{1}{4} - \frac{1}{2}(x-1)^2 \right] = \frac{1}{8}$$

So $h(x)$ is continuous at $x=0.5$, in $(0, 1)$

$$\left. \begin{aligned} \lim_{x \rightarrow 0.5^-} h'(x) &= \lim_{x \rightarrow 0.5^-} x = 0.5 \\ \lim_{x \rightarrow 0.5^+} h'(x) &= \lim_{x \rightarrow 0.5^+} (-x+1) = 0.5 \end{aligned} \right\} \Rightarrow \lim_{x \rightarrow 0.5} h'(x) = 0.5$$

$$\lim_{x \rightarrow 0.5^+} h'(x) = \lim_{x \rightarrow 0.5^+} (-x+1) = 0.5$$

So $h'(x)$ is continuous at $x=0.5$, in $(0, 1)$ $\Rightarrow h(x)$ in space C^1

$$\left. \begin{aligned} \lim_{x \rightarrow 0.5^-} h''(x) &= \lim_{x \rightarrow 0.5^-} 1 = 1 \\ \lim_{x \rightarrow 0.5^+} h''(x) &= \lim_{x \rightarrow 0.5^+} (-1) = -1 \end{aligned} \right\} \Rightarrow h''(x) \text{ is not continuous at } x=0.5$$

$$\lim_{x \rightarrow 0.5^+} h''(x) = \lim_{x \rightarrow 0.5^+} (-1) = -1$$

 $\Rightarrow h(x)$ is not in space C^2

$$e) H^2 = H^2(\Omega) = \{w : w \in L_2, w, x \in L_2, w, xx \in L_2\}$$

$$L_2 = L_2(\Omega) = \{w : \int_0^1 w^2 dx = \int_0^1 w'^2 dx < \infty\}$$

Bilinearity property

$$a(C_1 u + C_2 v, w) = \int_0^1 (C_1 u + C_2 v), x w, x \, dx$$

$$= \int_0^1 \frac{\partial(C_1 u + C_2 v)}{\partial x} \frac{\partial w}{\partial x} \, dx$$

$$= \int_0^1 \left(C_1 \frac{\partial u}{\partial x} + C_2 \frac{\partial v}{\partial x} \right) \frac{\partial w}{\partial x} \, dx$$

$$= \int_0^1 \left(C_1 \frac{\partial u}{\partial x} \frac{\partial w}{\partial x} + C_2 \frac{\partial v}{\partial x} \frac{\partial w}{\partial x} \right) \, dx$$

$$= C_1 \int_0^1 \frac{\partial u}{\partial x} \frac{\partial w}{\partial x} \, dx + C_2 \int_0^1 \frac{\partial v}{\partial x} \frac{\partial w}{\partial x} \, dx$$

$$= C_1 \int_0^1 u, x w, x \, dx + C_2 \int_0^1 v, x w, x \, dx$$

$$= C_1 a(u, w) + C_2 a(v, w)$$

$$(C_1 u + C_2 v, w) = \int_0^1 (C_1 u + C_2 v) w \, dx$$

$$= \int_0^1 C_1 u w \, dx + \int_0^1 C_2 v w \, dx$$

$$= C_1 \int_0^1 u w \, dx + C_2 \int_0^1 v w \, dx$$

$$= C_1 (u, w) + C_2 (v, w)$$

3. Solution

a) $C^k(\Omega)$: the class of continuous functions possessing k continuous derivative

$$\left. \begin{aligned} \lim_{x \rightarrow 0.5^-} h(x) &= \lim_{x \rightarrow 0.5^-} \frac{1}{2}x^2 = \frac{1}{8} \\ \lim_{x \rightarrow 0.5^+} h(x) &= \lim_{x \rightarrow 0.5^+} \left[\frac{1}{4} - \frac{1}{2}(x-1)^2 \right] = \frac{1}{8} \end{aligned} \right\} \Rightarrow \lim_{x \rightarrow 0.5} h(x) = \frac{1}{8}$$

$$\lim_{x \rightarrow 0.5^+} h(x) = \lim_{x \rightarrow 0.5^+} \left[\frac{1}{4} - \frac{1}{2}(x-1)^2 \right] = \frac{1}{8}$$

So $h(x)$ is continuous at $x=0.5$, in $(0, 1)$

$$\left. \begin{aligned} \lim_{x \rightarrow 0.5^-} h'(x) &= \lim_{x \rightarrow 0.5^-} x = 0.5 \\ \lim_{x \rightarrow 0.5^+} h'(x) &= \lim_{x \rightarrow 0.5^+} (-x+1) = 0.5 \end{aligned} \right\} \Rightarrow \lim_{x \rightarrow 0.5} h'(x) = 0.5$$

$$\lim_{x \rightarrow 0.5^+} h'(x) = \lim_{x \rightarrow 0.5^+} (-x+1) = 0.5$$

So $h'(x)$ is continuous at $x=0.5$, in $(0, 1)$ $\Rightarrow h(x)$ in space C^1

$$\left. \begin{aligned} \lim_{x \rightarrow 0.5^-} h''(x) &= \lim_{x \rightarrow 0.5^-} 1 = 1 \\ \lim_{x \rightarrow 0.5^+} h''(x) &= \lim_{x \rightarrow 0.5^+} (-1) = -1 \end{aligned} \right\} \Rightarrow h''(x) \text{ is not continuous at } x=0.5$$

$$\lim_{x \rightarrow 0.5^+} h''(x) = \lim_{x \rightarrow 0.5^+} (-1) = -1$$

 $\Rightarrow h(x)$ is not in space C^2

$$e) H^2 = H^2(\Omega) = \{w : w \in L_2, w, x \in L_2, w, xx \in L_2\}$$

$$L_2 = L_2(\Omega) = \{w : \int_0^1 w^2 dx = \int_0^1 w'^2 dx < \infty\}$$

4. Solution

a) Given f, g_0, g_1 , find $u \in \mathcal{S}$ such that

$$(w) \begin{cases} \int_0^1 w, x u, x \, dx = \int_0^1 w f \, dx \\ \text{for all } w \in \mathcal{V} \end{cases}$$

b) (s) \Rightarrow (w): strong solution solves (w)

$$u, xx + f = 0$$

$$w(u, xx + f) = 0$$

$$\int_0^1 w u, xx \, dx + \int_0^1 w f \, dx = 0$$

$$\int_0^1 w u, xx \, dx = w(1)u, x(1) - w(0)u, x(0) - \int_0^1 w, x u, x \, dx \quad (\text{IBP})$$

$$\Rightarrow \int_0^1 w, x u, x \, dx = \int_0^1 w f \, dx$$

$$u \in \mathcal{S} = \{u : u \in H^1, u(0) = g_0, u(1) = g_1\}$$

turn over.

② $(w) \Rightarrow (S)$: weak solution solves (S)

$$\int_0^1 w_{,xx} u_{,x} dx = \int_0^1 w f dx$$

$w \in \mathcal{V}$

$$\text{IBP: } \int_0^1 w_{,xx} u_{,x} dx = \underbrace{w(1)u(1)}_{=0} - \underbrace{w(0)u(0)}_{=0} - \int_0^1 w u_{,xx} dx = \int_0^1 w f dx$$

$$\Rightarrow \int_0^1 w(u_{,xx} + f) dx = 0 \quad (1)$$

$w(0) = w(1) = 0$

set $w = \phi(u_{,xx} + f)$ with $\phi > 0$, $\phi(0) = \phi(1) = 0$

$$(1) \Rightarrow \int_0^1 \underbrace{\phi}_{>0} \underbrace{(u_{,xx} + f)}_{=0} dx = 0$$

$$\therefore u_{,xx} + f = 0, \text{ with } u(0) = g_0, u(1) = g_1$$

$(u \in \mathcal{S})^2 \leftarrow$
